# REPAIRS ADVISER

SPECIFICATIONS GENERAL INFORMATION

To be used if a torque wrench cannot be used. After tightening fitting by hand, put a mark on nut or boss, then tighten special nut or straight fitting the number of flats shown.

### Metric Fastener Torque Value - Grade 7

Size	Steel or Gray Iron Torque	Aluminum Torque
	N·m (lb-ft)	N·m (lb-ft)
M6	11 (8)	8 (6)
M8	24 (18)	18 (14)
M10	52 (38)	41 (30)
M12	88 (65)	70 (52)
M14	138 (102)	111 (82)
M16	224 (165)	178 (132)

### General Information

#### Diesel Fuel

**Caution: Avoid Injury!** California Proposition 65 Warning: Diesel engine exhaust and some of its elements from this product are known to the State of California to cause cancer, birth defects, or other reproductive harm.

In general, diesel fuels are blended to satisfy the low air temperature requirements of the geographical area in which they are sold.

In North America, diesel fuel is usually specified to **ASTM D975** and sold as either **Grade 1** for cold air temperatures or **Grade 2** for warm air temperatures.

If diesel fuels being supplied in your area DO NOT meet any of the above specifications, use diesel fuels with the following equivalent properties:

- **Cetane Number 40 (minimum)**

A cetane number greater than 50 is preferred, especially for air temperatures below -20°C (-4°F) or elevations above 1500 m (5000 ft).

- **Cold Filter Plugging Point (CFPP)**

The air temperature at which diesel fuel begins to cloud or jell - at least 5°C (5°F) below the expected low air temperature range.

- **Sulfur Content of 0.05% (maximum)**

Diesel fuels for highway use in the United States now require sulfur content to be less than 0.05%.

If diesel fuel being used has a sulfur content greater than 0.05%, reduce the service interval for engine oil and filter by 50%.

Consult your local diesel fuel distributor for properties of the diesel fuel available in your area.

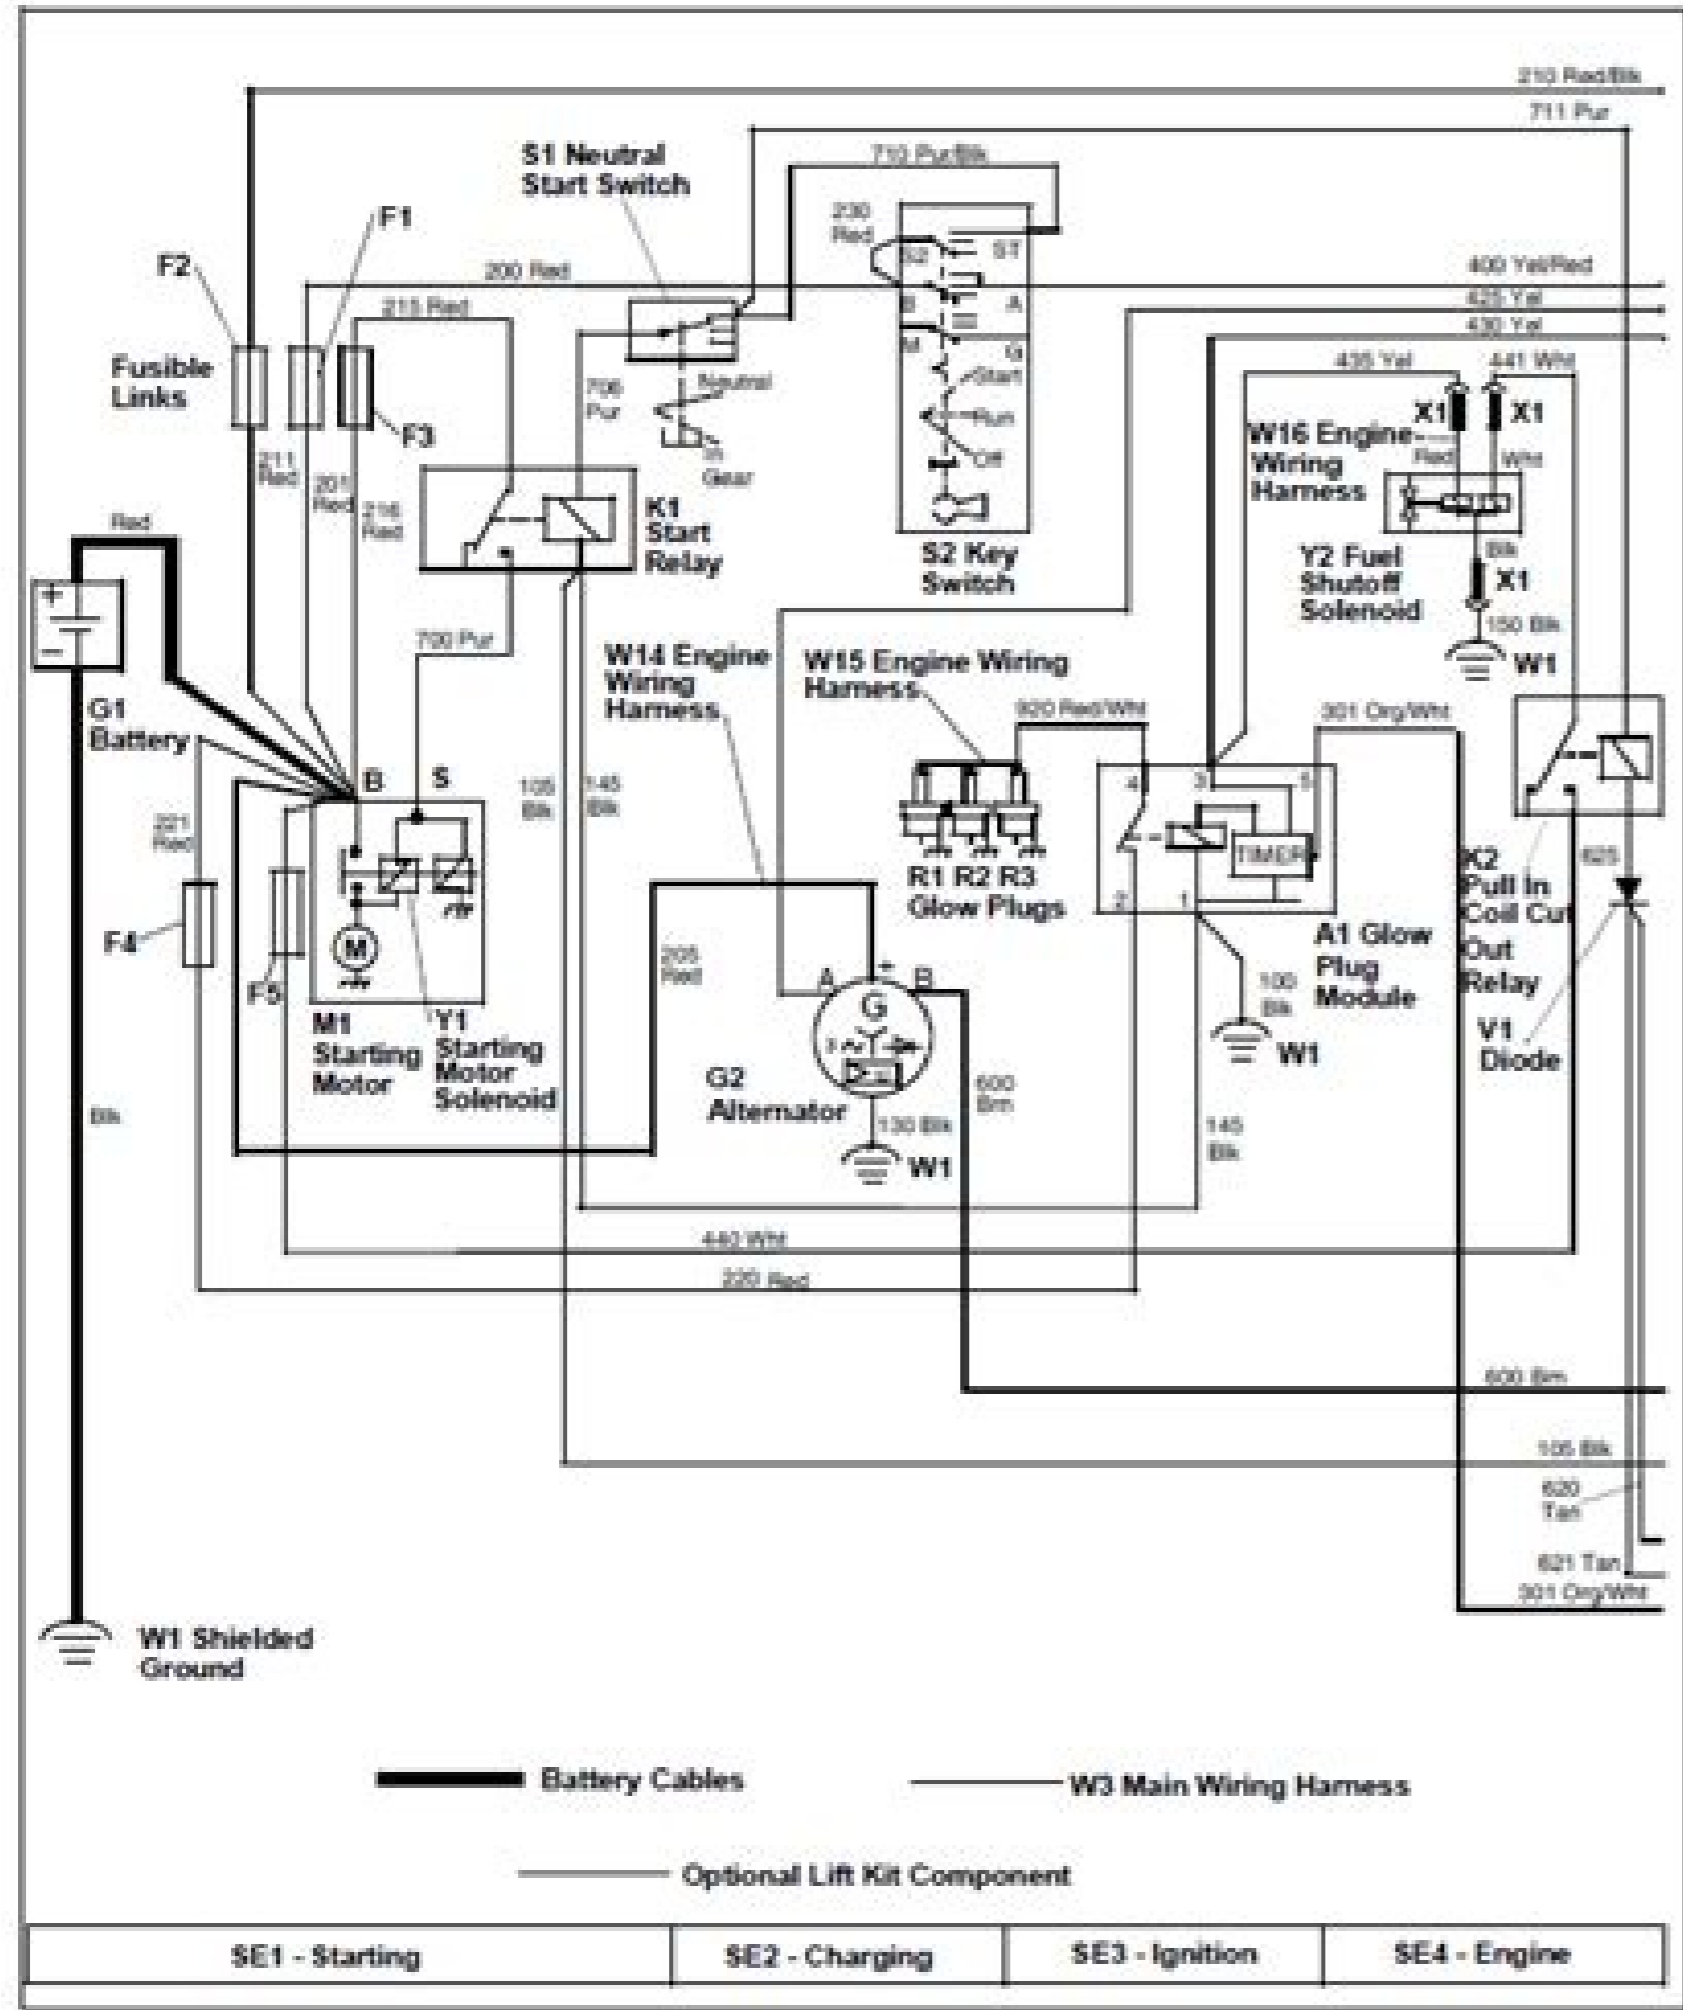

#### Diesel Fuel Lubricity

Diesel fuel must have adequate lubricity to ensure proper operation and durability of fuel injection system components. Fuel lubricity should pass a minimum of 3300 gram load level as measured by the BOCLE scuffing test.

# ELECTRICAL SCHEMATICS AND HARNESSES - 6X4 DIESEL

W3 Standard Electrical Schematic - 6X4 Diesel (S/N 003925 - 033000)

## ENGINE - FE290D TESTS AND ADJUSTMENTS

### Slow Idle Mixture Screw and Speed Adjustments

#### Reason:

To ensure correct fuel/air mixture and engine is running at correct SLOW idle speed.

#### Equipment:

- JT05719 Digital Tachometer

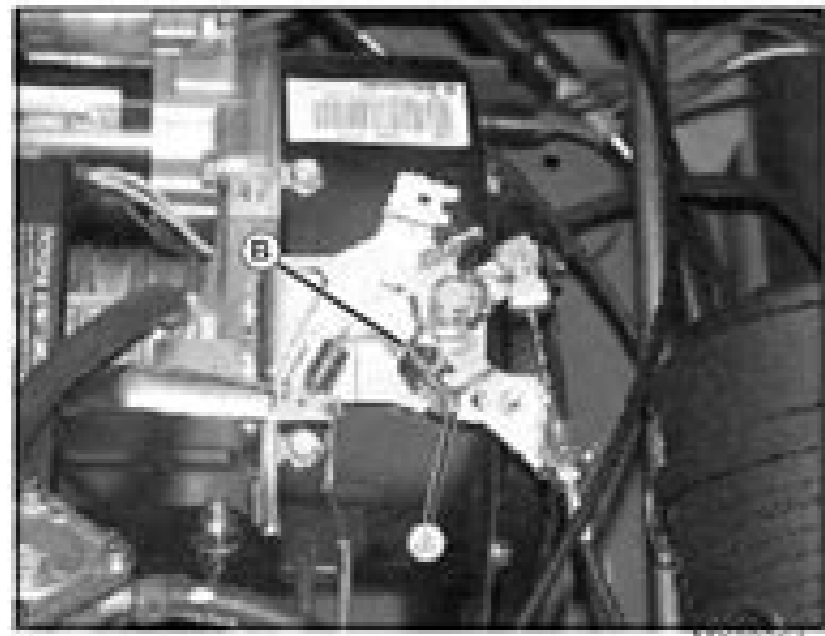

#### Procedure:

1. Park machine safely.
2. Run engine at MEDIUM speed for five minutes to reach operating temperature.

**Note:** When throttle pedal is released, it takes approximately 30 seconds for engine idle speed to stabilize.

3. Release throttle pedal.

**Caution:** Avoid Injury! Engine components are HOT. Be careful not to touch, especially the exhaust pipe or muffler, while making adjustments. Wear protective eye glasses and clothing.

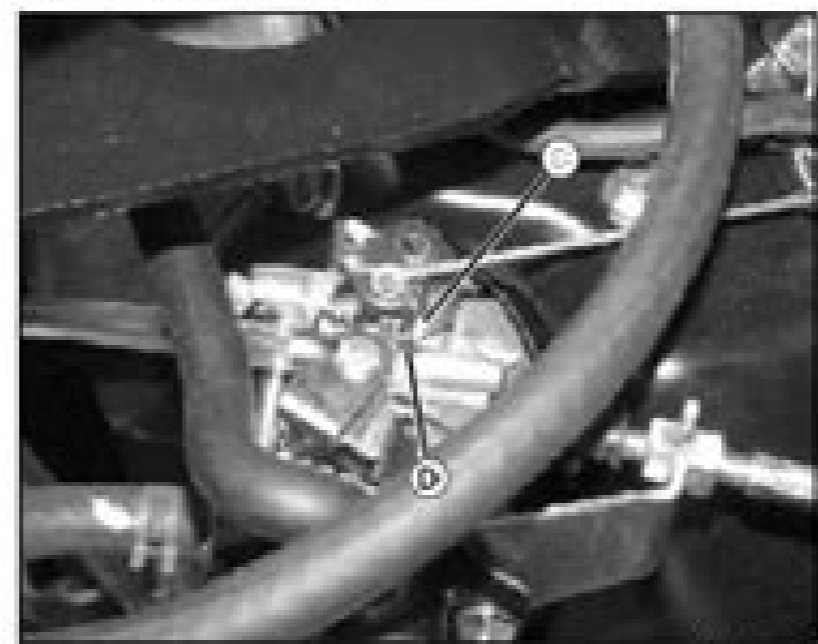

Throttle adjustment lever cover removed for photo clarity. Governed low idle adjustment can be made with cover on.

4. Adjust throttle control arm SLOW idle stop screw (A) to obtain governed idle speed of 1125 ± 75 rpm. If tab (B) does not stay against screw, adjust throttle cable to allow increased travel.

Travel is limited to about 3/4 turn on idle mixture screw for emission compliance. Do not force screw beyond limit tabs, screw is designed to break off if forced.

5. Adjust SLOW idle mixture screw (B) until smoothest idle is obtained between the limit tabs.

6. Hold tab (C) against stop screw (D), adjust screw until engine speed is 50 rpm less than governed SLOW idle.
7. Depress and release throttle pedal. Allow idle speed to stabilize. Recheck governed SLOW idle speed.

#### Specifications:

Governed Slow Idle ..... 1125 ± 75 rpm  
 Slow Idle (Governor Overridden) ..... 1075 ± 75 rpm

Engine - FE290D Tests and Adjustments - 76
